

Christoph Hess

Dr. Christoph Hess

Managing Director – Synergeticon GmbH, Hamburg

After my diploma in aerospace engineering I started my career with the former corporate research group of Airbus. There, I spent more than 5 years working on production processes for aircraft frames in CFRP. In 2013, I moved to the Center of Applied Aeronautical Research and most recently I developed robotic systems for the MRO field. Since 2019, I have been Managing Director of Synergeticon GmbH.

Motivation for aerial solutions:

The aviation context accompanies me since a long time. There are many solutions around an aircraft. Since drones disrupt the aerial ecosystem I am fascinated of the solutions which this new technology provides. Therefore, we love it to train our artificial intelligence system with drone data to be part of the solution. In my opinion it is necessary to bring professional competences and partners together to develop reliable and innovative solutions in this young market of unmanned aerial systems. As managing director of Synergeticon I am proud to be part of the solution development - especially with the chance to support the process of improving the conditions in east African with the African Drone Forum and the host organizations the government of Rwanda, the world bank and World Economic Forum.

LET'S START

THE JOURNEY.
